Introduction

In January 2010, DOF Travel, Danish Ornithological Society (DOF) carried out its first tour to Ethiopia.

The tour was designed to give the participants a possibility to see most of Ethiopia endemic birds. We have chosen to concentrate our activities in the central and Southern/Southeastern part of country and visit many different habitats. The number of bird species recorded was around 500 species. Stig Jensen visited a few localities in Northern Ethiopia before the group arrived; in this report only observations from the the DOF tour are included.

Ethiopia is a very interesting country and huge covering 1.104.300 km² and we only covered a small proportion. The Ethiopian landscape is dominated by the volcanically formed Ethiopian Highlands with the highest point at 4,620 m. The Ethiopian Highlands is bisected by the Rift Valley. The low-lying Southern part of the country is mainly semi-desert and desert. We also experience a huge variation in the climate from very cold nights in the Highland to the warm weather in the South. The human diversity in Ethiopia is huge with around 70 local languages are spoken in the country.

The travel conditions are very different from what we normally experience in Western Europe with basic accommodation and food. The infrastructure is good seen in an Africa context but the road system is underdeveloped.

The Ethiopia avifauna is rich with several endemic species and many Palaearctic and intra African migrants. Many of the birds are very easy approachable.

The participants were: Steen Skaarup, Martin Nielsen, Jon Lehmberg, Stig K. Rasmussen, Kirsten Letman, Niels Henrik Højbjerg, Finn Jensen, Verner Jensen, Morten M. Hansen, Karen & Leif Høxbroe, Marianne Mølgaard & Erik Mølgaard (tour leader), and Stig Jensen (tour leader).

The tour fee was DKK 28.500 including all transportation from Denmark, accommodations, full board, guides, and "official" tips, tour leaders as well as the usual DOF services.

Adonay Ethiopia tours www.adonaytour.com in Addis Ababa organised the whole trip. The arrangement was very well organized and we can warmly recommend the company. Our main bird guide on the tour was NegussieToye. Negussie knew all the prime birding area and he was very pleasant travel companion always trying to do his best. In a few places we also had local guides arranged by Negussie.

This report contains the following sections,

1. Summary of the journey (itinerary)
2. List of Birds
3. List of Mammals

The extensive field notes of Stig K. Rasmussen and Morten M. Hansen are the foundation of this report.

Species observed only by one or two persons are marked in the bird and mammals lists with initials of the observers in brackets.

It should not be forgotten that the whole trip was characterised by good fellowship and the pleasure of being together. Again it is a pleasure to look back on a successful DOF-tour! We hope to see all of you again!
